

Plants have seeds, shoots, roots and leaves.

Plants need light, water and soil to grow.

Once Upon a Story...

I know that bread is made by mixing water, flour and yeast together.

I know that **yeast** makes bread rise.

I know that biscuits would **dissolve** (break down) when they have been sitting in liquids for a long time.

I know some materials **absorb** (take in) water, like a sponge.
